

## Ciao Software's Table Management Module Exceptional Service without Touching a Button!

Ciao's Table Management Module lets you "see" what is happening throughout your restaurant from one easy-to-read screen. With Ciao's highly graphic, intuitive images you can scan the entire restaurant and know the status of each guest and table from any workstation. Ciao helps you anticipate delays before they occur, reallocate resources and provide that extra touch of personal service just when it's needed. With Ciao's Table Management Module you can create the ultimate dining experience.

With Ciao's Table Management Module, you can

- View order/status detail at the seat or table level – allowing you to make quick adjustments to ensure outstanding customer service
- Track orders by seating – eliminating the need to interrupt customer conversations to ask who ordered what
- Prompt servers based upon meal stages – anticipating customer needs before they ask
- View status of checkout (i.e. check being paid, table ready for clearing) – improving table turnover
- Create checks by seat – reducing split check errors
- Retrieve checks with a single screen touch – providing a quicker response time to customer requests

### TABLE MANAGEMENT

Ciao's Table Management Module provides a comprehensive view of your restaurant and can show details down to the meal stage of a particular individual at a particular table. Table alerts provide servers with visual cues and timers helping them provide better, more attentive service to customers.
